Issue_ID	Category	Description	Impact_on_Reporting	How_Detected
DQ-001	KPI Aggregation / Business Logic	The pivot table shows “Sum of AvgTenureYears” with a total of 21.38, which is just the sum of departmental averages (7.24 + 6.86 + 7.28) rather than a true overall average tenure.	The “Grand Total” tenure figure is misleading and not interpretable as an actual HR metric. It may lead managers to misread overall tenure.	Checked the pivot table field name and totals; noticed “Sum of AvgTenureYears” and an unrealistic combined number.
DQ-002	KPI Definition / Calculation	The pivot shows “Sum of AttritionRatePct” with a grand total of 53.52. This appears to be the sum of departmental percentages, which is not meaningful as a total attrition rate.	The total attrition figure is mathematically invalid and could be misinterpreted as overall organisational attrition.	Observed that departmental attrition rates (19.05, 13.84, 20.63) are added together in the total row.
DQ-003	Metadata / Naming Convention	KPI labels such as “Sum of AvgTenureYears” are confusing and technically incorrect.	Non-technical users may not understand what is being shown, reducing trust in the report and increasing the risk of misinterpretation.	Reviewed pivot field captions and axis labels on charts.
DQ-004	Presentation / Business Logic	The dashboard displays “Grand Total” rows for average tenure and attrition %, which are mathematically questionable (averages of averages; sums of rates).	Totals can be misread as overall organisational metrics, leading to incorrect conclusions about tenure and attrition.	Observed total row values for AvgTenureYears and AttritionRatePct and compared them to departmental values.
DQ-005	Data Model / Reporting Scope	The current dashboard appears to show a single snapshot by department without any date or month dimension.	1. Cannot track trends over time (e.g. whether attrition is improving). 2. Hard to use the dashboard for strategic, longitudinal workforce analysis.	No visible date, period filters or time-based breakdown in the report pages.
DQ-006	Coverage / Completeness	Current dashboard only shows three departments: Human Resources, Research & Development, Sales.	If the underlying dataset contains more business units, they are not visible in the dashboard, leading to partial workforce insight.	Reviewed department list in the pivot tables and charts.
DQ-007	Documentation / Data Governance	The dashboard does not include visible documentation for how headcount, tenure and attrition are defined or calculated.	Different users may interpret the metrics differently, creating inconsistency in how the numbers are used in decision-making.	No visible KPI definitions or assumptions in the PDF export.

Resolution or Mitigation	Status
1. Change the value field settings to Average on the underlying tenure field (e.g. YearsAtCompany). 2. Remove the "Grand Total" row for averages unless calculating a weighted average. 3. Document in KPI definitions that tenure is always reported as an average, not a sum.	To be fixed
1. Define attrition as: Number of leavers during the period / average headcount during the period. 2. Recompute attrition at the fact level (per employee/month), then summarise using this formula, not by summing rates. 3. Remove or hide the total row for attrition in the pivot, or replace it with a correctly calculated overall rate.	To be fixed
1. Rename fields to clear business terms, e.g.: Average Tenure (Years), Attrition Rate (%), Headcount. 2. Apply consistent naming across all tables and charts.	Planned
1. Remove "Grand Total" rows for percentage and average fields in these pivot tables. 2. If an overall figure is required, calculate it explicitly (e.g. weighted average) outside the pivot and display it clearly as "Overall Tenure" or "Overall Attrition Rate".	To be fixed
1. Introduce a ReportingMonth field and include it in the data model. 2. Add slicers or filters to allow month-over-month comparison. 3. Extend pivot tables to show changes across periods.	Enhancement opportunity
1. Confirm whether the source dataset includes additional departments. 2. If yes, update the pivots and charts to include them. 3. If no, document that the dashboard is a subset view for illustration or pilot purposes.	To be investigated
1. Create a short KPI Definitions section in the report or README. 2. Include formulas for headcount, tenure and attrition. 3. Store KPI definitions alongside the data model as part of metadata.	Planned

Field Name	Description	Data Type	Validation/Allowed Values / Format
Employee Master Data Fields			
EmployeeID	Unique identifier for each employee	Integer	> 0
Age	Employee age in years	Integer	18–70
Gender	Employee gender	Text	Male, Female, Other
MaritalStatus	Marital status	Text	Single, Married, Divorced
Department	Functional area	Text	HR, Sales, R&D
Job & Position Fields			
JobRole	Title/role	Text	Must match controlled list
JobLevel	Seniority band	Integer	1–5
YearsAtCompany	Tenure	Numeric	≥ 0
YearsInCurrentRole	Time in current role	Numeric	≥ 0
YearsWithCurrManager	Time with manager	Numeric	≥ 0
YearsSinceLastPromotion	Promotion gap	Numeric	≥ 0
Compensation Fields			
MonthlyIncome	Current monthly salary	Numeric	> 0; flag extreme outliers
MonthlyRate	Monthly rate	Numeric	> 0
HourlyRate	Hourly compensation	Numeric	> 0
PercentSalaryHike	Recent raise %	Numeric	0–100
Performance & Engagement Fields			
PerformanceRating	Most recent rating	Integer	1–4
JobSatisfaction	Satisfaction score	Integer	1–4
EnvironmentSatisfaction	Work environment satisfaction	Integer	1–4
WorkLifeBalance	Work-life balance score	Integer	1–4
OverTime	Whether employee works overtime	Text	Yes / No
Attrition Fields			
Attrition	Whether employee left the company	Text	Yes/No
AttritionRatePct (Derived)	Attrition % per department	Numeric	0–100%
LeaversCount (Derived)	# of employees who left	Integer	≥ 0
Headcount (Derived)	Total employees per group	Integer	≥ 0

Validation Rules	Notes
No duplicates, not null	Primary Key
Flag <18 or >70	Used in segmentation
Standardise values	May require anonymisation
No blanks	Categorical field
Standardised naming	Used in dashboard
Used for deeper segmentation	
Must align with org structure	
Must be numeric	
Must not exceed YearsAtCompany	
Must not exceed YearsAtCompany	
Value > YearsAtCompany = invalid	
Often skewed in dataset	
1 = Low, 4 = High	
HR engagement metric	
Useful for attrition patterns	
Convert to Boolean for analysis	
Main target variable	
Should NOT be summed	
Only count Attrition = "Yes"	
Used in KPI calculations	

KPI Name	Definition	Formula
Section 1: Workforce Composition KPIs		
Headcount	Total number of active employees in the dataset for the reporting period.	=COUNTIF(Attrition,"No") or total employees if point-in-time
New Hires	Employees who joined during the reporting period.	Requires a "HireDate" column → =COUNTIFS(HireDate,">="&StartDate, HireDate,"<="&EndDate)
Leavers	Employees who left the company during the reporting period.	=COUNTIF(Attrition,"Yes")
Section 2: Attrition Metrics		
Attrition Count	Number of employees who left.	=COUNTIF(Attrition,"Yes")
Attrition Rate (%)	% of employees who left during the reporting period.	=Leavers / Headcount
Attrition by Department	Attrition rate calculated separately by department.	=COUNTIFS(Department,X,Attrition,"Yes") / COUNTIF(Department,X)
Section 3: Performance & Engagement KPIs		
Avg Performance Rating	Average rating of employees.	=AVERAGE(PerformanceRating)
High Performers %	% of employees with rating 4.	=COUNTIF(PerformanceRating,4)/Headcount
Avg Job Satisfaction	Mean satisfaction score.	=AVERAGE(JobSatisfaction)
Avg Work-Life Balance Score	Avg WLB reported by staff.	=AVERAGE(WorkLifeBalance)
Overtime Rate	% employees working overtime.	=COUNTIF(OverTime,"Yes")/Headcount
Section 4: Tenure Metrics		
Average Tenure (YearsAtCompany)	Average length of service.	=AVERAGE(YearsAtCompany)
High-Tenure Employees %	% with >5 years at company.	=COUNTIF(YearsAtCompany,">5")/Headcount
Avg Years in Current Role	Mean time employees spent in current role.	=AVERAGE(YearsInCurrentRole)
Section 5: Compensation KPIs		
Average Monthly Income	Mean income of active staff.	=AVERAGE(MonthlyIncome)
Compensation Spread	Variance in salary range.	=MAX(MonthlyIncome)-MIN(MonthlyIncome)
Salary Hike Average	Average % salary hike.	=AVERAGE(PercentSalaryHike)

Notes / HR Standard
Usually counts only active staff.
If dataset does not include HireDate, leave blank or note "Not available."
Used in attrition rate.
Same as Leavers.
HR standard KPI. Usually annualised.
Key HR KPI.
Useful for performance distribution.
Can adjust threshold.
Based on 1–4 scale.
Flag <2.5 as risk.
Good for burnout risk.
Used for workforce stability.
Often correlated with lower attrition.
Useful for workforce planning.
Outliers should be flagged.
Helps identify pay inequities.
Useful for retention analysis.
